FresherImage : Photoshop : 3D Sphere

PHOTOSHOP TIP: 3D Sphere

by Doni Ronquillo
<http://www.freewebtemplates.com>

This tip was used in the creation of FresherImage.com, and can be found behind our parrot mascot "Clipper" in the upper left coner. The color used on the site is yellow, but otherwise remains the same as the blue version below.

This tip will work in any version of [Adobe Photoshop](#).

Step 1 -  Open a new 400x400 pixel document, and make a circle with the elliptical marquee. (hint: hold down shift to make a perfect circle.)

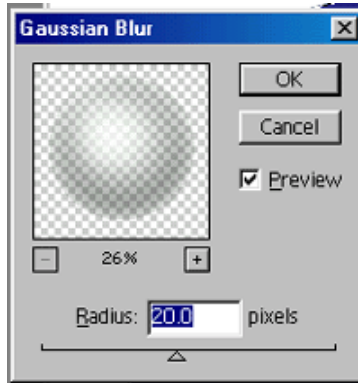

Step 2 -  Make a new layer, use the Paint Bucket Tool to fill the circle with a color of your choice.

Step 3 -  Create another layer, select the airbrush tool i used the largest brush. Set your foreground color to black then spray around the edge to create a shadow similar to the image on your left.

Step 4 -  Create one more layer and use the airbrush tool again using white to create your highlight.

Step 5 - Merge the shadow and highlight layer together. Go to **Filter:Blur:Gaussian Blur** and set the radius to 20 pixels.

Step 6 - Now merge the two remaining layers together and you will have your spheroid.
